

Pakistan Studies

Final Exam Complete Guide

All 9 Topics – Easy English Explanation

Topics From Your Material (5):

1. Muslim Nationalism in South Asia (1857–1947)
2. Colonial Legacy and State Formation in Pakistan
3. Geopolitical and Strategic Importance of Pakistan
4. Foreign Policy of Pakistan
5. Hybrid Warfare – Contemporary Hybrid Threats

Topics You Need to Know (4) – Written for You:

6. Administrative and Political Problems
7. Fiscal Relations Between Federal and Provincial Government
8. Relations of Pakistan with USA, China, and Afghanistan
9. Climate Change and Environmental Degradation in Pakistan

Read everything carefully. Easy English. Nothing skipped.

Contents

1	Topic 1: Muslim Nationalism in South Asia (1857–1947)	5
1.1	Background – Why Did This Movement Start?	5
1.2	Early Phase (1857–1906)	5
1.2.1	What Happened After 1857?	5
1.2.2	Sir Syed Ahmad Khan and the Aligarh Movement	5
1.2.3	Political Awakening	6
1.3	Political Mobilization (1906–1930s)	6
1.3.1	Formation of All-India Muslim League (1906)	6
1.3.2	Lucknow Pact (1916)	6
1.3.3	Why Did Things Get Worse in the 1920s?	6
1.4	Ideological Development (1930–1940)	7
1.4.1	Allama Iqbal’s Allahabad Address (1930)	7
1.4.2	Round Table Conferences (1930–32)	7
1.4.3	Government of India Act 1935 and 1937 Elections	7
1.5	The Pakistan Movement (1940–1947)	7
1.5.1	Lahore Resolution (1940) – The Pakistan Demand	7
1.5.2	The Final Struggle (1940–1947)	7
1.5.3	Creation of Pakistan (1947)	8
2	Topic 2: Colonial Legacy and State Formation in Pakistan	9
2.1	Introduction	9
2.2	Colonial Administrative Legacy – The Bureaucracy	9
2.3	Political and Communal Foundations	9
2.4	Economic and Structural Challenges	10
2.5	Civil-Military Relations – The Military’s Power	10
2.6	Federalism and Regional Tensions	10
2.7	Conclusion	11
3	Topic 3: Geopolitical and Strategic Importance of Pakistan	12
3.1	Introduction	12
3.2	Geographical Location	12
3.3	Strategic Importance	12
3.3.1	Security in South Asia	12
3.3.2	Afghanistan Factor	12
3.3.3	China-Pakistan Partnership (CPEC)	13
3.4	Economic and Trade Significance	13
3.4.1	Gwadar Port	13
3.4.2	Energy Routes	13
3.5	Importance in the Muslim World	13
3.6	Role in International Politics	13
3.7	Challenges	14
3.8	Conclusion	14
4	Topic 4: Foreign Policy of Pakistan	15
4.1	What is Foreign Policy?	15
4.2	Instruments of Foreign Policy	15

4.2.1	1. Diplomacy	15
4.2.2	2. Publicity and Propaganda	15
4.2.3	3. Balance of Power	15
4.2.4	4. Collective Security	15
4.2.5	5. International Law and Organizations	16
4.2.6	6. Economic and Non-Political Methods	16
4.2.7	7. War and Peace	16
4.3	Determinants of Foreign Policy	16
4.3.1	General/Objective Determinants (apply to all countries)	16
4.3.2	Specific/Internal Determinants (different for each country)	16
4.3.3	External Determinants	17
5	Topic 5: Hybrid Warfare – Contemporary Hybrid Threats to Pakistan	18
5.1	Introduction	18
5.2	The First Case: 1971 Fall of Dacca	18
5.3	Pakistan's Internal Security Problems Post-9/11	18
5.4	Internal Challenges Enabling Hybrid Warfare	19
5.5	External Challenges	19
5.6	Security Challenges	19
5.6.1	Terrorism – TTP (Tehrik-e-Taliban Pakistan)	19
5.6.2	ISIS (Islamic State) in Pakistan	20
5.6.3	Sectarian Organizations	20

5.7.3	Attacks on CPEC	20
5.7.4	Nuclear Propaganda	20
5.7.5	Water War	21
5.7.6	Cyber Warfare	21
5.8	Implications/Effects of Hybrid Warfare on Pakistan	21
5.9	Conclusion	21
6	Topic 6: Administrative and Political Problems of Pakistan	22
6.1	Introduction	22
6.2	Major Administrative Problems	22
6.2.1	1. Bureaucratic Dominance	22
6.2.2	2. Corruption	22
6.2.3	3. Poor Service Delivery	22
6.2.4	4. Law and Order Problems	23
6.2.5	5. Energy Crisis	23
6.3	Major Political Problems	23
6.3.1	1. Military Coups and Intervention	23
6.3.2	2. Political Instability	23
6.3.3	3. Delayed Constitution-Making	23
6.3.4	4. Weak Political Parties	23
6.3.5	5. Center-Province Conflict	24
6.3.6	6. Judicial Problems	24
7	Topic 7: Fiscal Relations Between Federal and Provincial Governments	25

7.1	Introduction	25
7.2	How Revenue is Collected in Pakistan	25
7.3	National Finance Commission (NFC) Award	25
7.4	18th Amendment (2010) and Fiscal Devolution	26
7.5	Problems in Fiscal Relations	26
7.5.1	1. Horizontal Imbalance	26
7.5.2	2. Federal Dependence	26
7.5.3	3. Disputes Over Natural Resources	27
7.5.4	4. Poor Provincial Tax Collection	27
7.5.5	5. Fiscal Deficit	27
8	Topic 8: Relations of Pakistan with USA, China, and Afghanistan	28
8.1	Pakistan-USA Relations	28
8.1.1	Overview	28
8.1.2	Phase 1: Cold War Alliance (1947–1979)	28
8.1.3	Phase 2: Soviet-Afghan War (1979–1989)	28
8.1.4	Phase 3: War on Terror (2001–2021)	28
8.1.5	Current State	29
8.2	Pakistan-China Relations	29
8.2.1	Overview	29
8.2.2	Why This Relationship Works	29
8.2.3	Key Milestones	29
8.2.4	CPEC – China-Pakistan Economic Corridor	30
8.2.5	Current State	30
8.3	Pakistan-Afghanistan Relations	30
8.3.1	Overview	30
8.3.2	The Durand Line Problem	30
8.3.3	Soviet-Afghan War (1979–89)	30
8.3.4	Taliban Era (1996–2001)	30
8.3.5	Post-9/11 Complications	31
8.3.6	After US Withdrawal (2021)	31
9	Topic 9: Climate Change and Environmental Degradation in Pakistan	32
9.1	Introduction	32
9.2	What is Climate Change?	32
9.3	How Climate Change Affects Pakistan	32
9.3.1	1. Floods	32
9.3.2	2. Glaciers Melting (GLOF)	32
9.3.3	3. Water Scarcity	33
9.3.4	4. Extreme Heat	33
9.3.5	5. Agricultural Impact	33
9.3.6	6. Displacement of People	33
9.4	Environmental Degradation in Pakistan	33
9.4.1	1. Deforestation	33
9.4.2	2. Air Pollution	34
9.4.3	3. Water Pollution	34
9.4.4	4. Plastic Pollution	34
9.4.5	5. Soil Degradation	34
9.5	Pakistan’s Efforts and Challenges	34

Final Quick Revision

36

Topic 1: Muslim Nationalism in South Asia (1857–1947)

Simple Definition

Muslim nationalism means the idea that Muslims of India were not just a religious group – they were a **separate nation** with their own culture, history, and political needs. This idea slowly grew from 1857 and finally led to the creation of Pakistan in 1947.

Background – Why Did This Movement Start?

Before the British came, Muslims **ruled India** under the Mughal Empire. When British rule started, Muslims lost everything – power, land, jobs, and respect. They were now a minority, and they feared that in a democratic system, the Hindu majority would always dominate them.

- Muslims lost political power after the fall of the Mughal Empire.
- British blamed Muslims for the 1857 rebellion and punished them heavily.
- Hindus adapted to British rule faster – they got more jobs and education.
- Muslims felt left behind, unsafe, and politically weak.

This fear and insecurity slowly turned into a **political movement** – Muslims started thinking: “We need our own separate identity and our own country.”

Early Phase (1857–1906)

What Happened After 1857?

The 1857 War of Independence failed. After this:

- Mughal rule officially ended. British took full control.
- Muslims were seen as rebels. British did not trust them.
- Muslims lost government jobs, military positions, and land.
- Their schools and mosques became weak and poorly funded.
- Hindus were moving ahead – Muslims were falling behind.

Sir Syed Ahmad Khan and the Aligarh Movement

Sir Syed Ahmad Khan was the most important Muslim leader of this time. He saw that Muslims were suffering and he had a clear plan:

Sir Syed’s Plan in Simple Words

- Get modern education – learn English, science, and administration.
- Be friendly with the British – do not fight them, work with them.
- Hindus and Muslims are **two separate communities** – they cannot share one

political identity.

In **1875**, he founded the **Muhammadan Anglo-Oriental College** at Aligarh, which later became Aligarh Muslim University. This college gave Muslims modern education and helped them compete for government jobs.

Sir Syed also introduced the early idea of what later became the **Two-Nation Theory** – the idea that Hindus and Muslims are two different nations. He was not asking for a separate country yet, but he was planting the seed.

Political Awakening

In **1886**, Sir Syed started the **All India Muhammadan Educational Conference**. This was not just about education – it was also about building political awareness among Muslims. By 1900, Muslims realized they needed a proper political organization to protect their rights.

Political Mobilization (1906–1930s)

Formation of All-India Muslim League (1906)

In **1906**, Muslim leaders met in **Dhaka** and founded the **All-India Muslim League**. Its main goal was simple: protect Muslim rights in the British system.

Their first big success was the **Minto-Morley Reforms (1909)**, which gave Muslims **separate electorates** – meaning Muslims would vote separately and elect their own representatives. This was very important because it meant Hindus could not outvote Muslims in elections.

Lucknow Pact (1916)

In 1916, the Muslim League and the Indian National Congress (Hindu-led party) signed the **Lucknow Pact**. Congress agreed to accept separate electorates for Muslims. This was the **peak of Hindu-Muslim cooperation**. But it did not last long.

Why Did Things Get Worse in the 1920s?

- **Hindi-Urdu Controversy:** Hindus wanted Hindi as the national language, Muslims wanted Urdu. Language became a symbol of identity conflict.
- **Hindu Revivalist Movements:** Groups like Shuddhi (converting Muslims back to Hinduism) and Sangathan (Hindu unity) scared Muslims.
- **Khilafat Movement failed (1919–1924):** Muslims had joined Congress to support the Turkish Caliph. When the movement failed, Muslims felt Congress had not truly helped them.
- **Nehru Report (1928):** Congress published this report and **rejected separate electorates** for Muslims. This was a turning point. Muslims now felt they could **never be safe inside a Hindu-majority India**.

Ideological Development (1930–1940)

Allama Iqbal's Allahabad Address (1930)

Allama Muhammad Iqbal was a great poet and thinker. In his famous **Allahabad Address (1930)**, he said: Muslims need a separate state in the north-western part of India where they can live according to their own values and religion.

This was the **first clear intellectual vision** of Pakistan. Iqbal did not give a complete plan, but his speech gave Muslims hope and a direction.

Round Table Conferences (1930–32)

Muslim leaders attended these conferences in London. They demanded constitutional protections for Muslims. But nothing concrete came out for Muslims.

Government of India Act 1935 and 1937 Elections

This act gave provinces more power. In the **1937 elections**, Congress won in many provinces and formed governments. But Congress did not include Muslim League ministers in its governments. Muslims felt ignored and sidelined. This made them believe that **Congress would never share power with Muslims** – only the Muslim League could save them.

The Pakistan Movement (1940–1947)

Lahore Resolution (1940) – The Pakistan Demand

On **23 March 1940**, the Muslim League held its annual session in Lahore. Under the leadership of **Muhammad Ali Jinnah (Quaid-i-Azam)**, they passed the **Lahore Resolution**.

Lahore Resolution – Most Important Point

The resolution demanded the creation of **independent Muslim states** in the Muslim-majority areas of India. This was the official demand for Pakistan. The Two-Nation Theory became the **official foundation** of this demand.

The Final Struggle (1940–1947)

- Jinnah became the **Quaid-i-Azam** (Great Leader) – the undisputed leader of all Indian Muslims.
- The Muslim League became a mass movement – millions of ordinary Muslims joined.
- The **Cabinet Mission Plan (1946)** was rejected because Congress refused to give Muslims real power-sharing.
- **Direct Action Day (August 16, 1946)** showed how deep the communal divide was – terrible violence broke out across India.

Creation of Pakistan (1947)

Under the **Mountbatten Plan**, British India was divided. On **14 August 1947**, Pakistan became an independent country. The dream of Muslim nationalists was finally achieved.

What to Remember for Exam

Key dates: 1857 (War), 1875 (Aligarh), 1906 (Muslim League), 1916 (Lucknow Pact), 1928 (Nehru Report), 1930 (Iqbal speech), 1940 (Lahore Resolution), 1947 (Pakistan).

Key people: Sir Syed Ahmad Khan, Allama Iqbal, Muhammad Ali Jinnah.

Key concept: Two-Nation Theory – Muslims and Hindus are two separate nations.

Topic 2: Colonial Legacy and State Formation in Pakistan

Simple Definition

“Colonial legacy” means the things that British rule left behind – institutions, systems, and habits – that Pakistan inherited in 1947. These things shaped how Pakistan was governed and developed after independence.

Introduction

When Pakistan was created in 1947, it did not start from zero. It inherited almost everything from British rule – the bureaucracy (civil servants), the army, the legal system, and the political habits. This was both helpful and harmful. It helped Pakistan survive the early years, but it also created long-term problems like military dominance, weak democracy, and regional tensions.

Colonial Administrative Legacy – The Bureaucracy

Under British rule, India was governed by the **Indian Civil Service (ICS)**. This was a very powerful system of civil servants (government officers) who ran everything with strict control from the top.

When Pakistan was born:

- Pakistan got some of these ICS officers and continued the same system.
- There were **not enough experienced politicians** to run the government.
- So **civil servants (bureaucrats) took over** most of the government work.
- This made the government **centralized** – all decisions came from the top.
- Democratic institutions (parliament, political parties) remained weak because bureaucrats were doing their job.

Simple Summary

British left behind a top-down, centralized bureaucracy. Pakistan used it but it slowed down democracy.

Political and Communal Foundations

The British had a policy of **separate electorates** – Hindus voted for Hindu seats, Muslims for Muslim seats. This made religion the **basis of politics**.

- The Muslim League was formed within this colonial framework.
- Pakistan was founded on the idea of a Muslim homeland.
- But after independence, the question became: what kind of Islamic state should Pakistan be? This debate was never fully resolved.

- There were long arguments about: Should Islamic law be the constitution? What rights do non-Muslims have?
- These debates slowed down constitution-making. Pakistan's first constitution came only in **1956** – 9 years after independence!

Economic and Structural Challenges

The areas that became Pakistan were mostly agricultural. British economic policies had created:

- **Very little industry** – Pakistan had almost no factories.
- **Underdeveloped financial institutions** – almost no proper banks or financial systems.
- **Regional inequalities** – some areas were much more developed than others.
- **Refugee crisis** – millions of Muslims came from India, creating huge pressure on the economy and administration.

All of this forced the government to rely on centralized control and planning just to survive.

Civil-Military Relations – The Military's Power

The British had built a **very strong, disciplined, professional army** in India. A large part of this army came from areas that became Pakistan (Punjab, NWFP). So Pakistan got a strong military institution.

- The military was the **most organized institution** in Pakistan from day one.
- Politicians were weak, parties were not well-organized, and governments were unstable.
- In this situation, the military filled the power vacuum.
- In **1958**, General Ayub Khan imposed the **first military coup** (takeover).
- Since then, the military has repeatedly been involved in Pakistani politics.

Key Point

The military's power in Pakistan is not just about ambition. It is also because the British left behind a strong army institution at a time when civilian political institutions were very weak.

Federalism and Regional Tensions

Pakistan had a very unusual shape – **two wings** (East Pakistan and West Pakistan) separated by 1,000 miles of Indian territory.

- East Pakistan had **more population** but less political and military power.
- West Pakistan dominated the government, army, and economy.

- In 1952, the **Language Movement** began in East Pakistan when the government said Urdu (a West Pakistani language) would be the only national language. East Pakistanis spoke Bengali and demanded equal status.
- This was a classic problem of **centralization vs regional identity**.
- After the **1970 elections**, the Awami League (East Pakistan) won the majority but was denied power.
- This led to **civil war in 1971** and the creation of **Bangladesh**.

Conclusion

Conclusion in Simple Points

- Colonial legacy helped Pakistan survive early crises (strong army, bureaucracy).
- But it also caused long-term problems: military dominance, weak democracy, regional tensions.
- The centralized system inherited from British rule did not suit a diverse country like Pakistan.
- Pakistan's political history – military coups, constitutional crises, regional conflicts – can all be traced back to what the British left behind.

Topic 3: Geopolitical and Strategic Importance of Pakistan

Simple Definition

“Geopolitical importance” means how important a country is because of WHERE it is on the map and what role it plays in world politics. Pakistan is very important because it sits at the crossroads of four major regions.

Introduction

Pakistan is located in one of the most strategically important places in the world. It sits between **South Asia, Central Asia, the Middle East, and China**. Because of this, big countries and global powers have always paid special attention to Pakistan – both to use it and to worry about it.

Geographical Location

- **East:** India
- **West:** Afghanistan and Iran
- **North:** China
- **South:** Arabian Sea (access to sea routes)

Why this matters:

- Pakistan is a **natural gateway** between the Middle East, Central Asia, and South Asia.
- It is very close to the **Persian Gulf** – the world’s biggest oil-producing region.
- The **Strait of Hormuz** (through which 20% of the world’s oil passes) is only a few hundred kilometers from Pakistan’s coast.

Strategic Importance

Security in South Asia

- Pakistan is a **nuclear power** – the only Muslim-majority country with nuclear weapons. This makes it very important in world politics.
- It plays a key role in the **balance of power in South Asia**, especially against India.
- Pakistan has one of the **largest armies** in the world.

Afghanistan Factor

- Pakistan shares a long border with Afghanistan called the **Durand Line**.

- During the **Cold War (1979–89)**: Pakistan was America’s partner against the Soviet invasion of Afghanistan. Pakistani territory was used to train and supply Afghan fighters (Mujahideen).
- After **9/11 (2001)**: Pakistan became a key partner in the US-led War on Terror. Without Pakistan’s cooperation, the USA could not have operated in Afghanistan.

China-Pakistan Partnership (CPEC)

- Pakistan and China have a very close relationship – often called “iron brothers.”
- The **China-Pakistan Economic Corridor (CPEC)** is a huge project connecting China’s western region to Pakistan’s **Gwadar Port** on the Arabian Sea.
- This gives China access to the sea without going around Southeast Asia – saving thousands of kilometers.
- CPEC is part of China’s global **Belt and Road Initiative (BRI)**.

Economic and Trade Significance

Gwadar Port

- Gwadar is a **deep-sea port** on the Arabian Sea, very close to the Strait of Hormuz.
- It can become a **major international trade hub** for China, Central Asian countries, and the Middle East.
- It gives landlocked Central Asian countries (Kazakhstan, Tajikistan, etc.) access to the sea.

Energy Routes

Pakistan can be a route for:

- Oil and gas pipelines from Iran, Turkmenistan to South/Central Asia.
- Trade routes connecting South Asia to Central Asia and the Middle East.

Importance in the Muslim World

- Pakistan is the **second largest Muslim-majority country** by population.
- It is the **only nuclear-armed Islamic state** – a very unique position.
- Pakistan has always spoken for Muslim causes: Kashmir, Palestine, etc.
- It is a member of the **OIC (Organisation of Islamic Cooperation)** and plays a leading role.

Role in International Politics

- Pakistan is one of the **largest contributors to UN peacekeeping missions** – sending troops to help peace in troubled countries around the world.

- Has important relationships with: USA, China, Saudi Arabia, Turkey, UAE.
- Has been a key player in global events: Cold War, War on Terror, Afghan peace talks.

Challenges

- **Terrorism and instability in Afghanistan** affect Pakistan's own security.
- **India-Pakistan conflict** (especially Kashmir) limits regional cooperation.
- **Weak economy** – energy shortages, dependence on foreign loans – limits Pakistan's ability to use its strategic position.
- **International image problem** – Pakistan is sometimes seen as linked to terrorism, which reduces its soft power.

Conclusion

Simple Conclusion

Pakistan's location makes it one of the most important countries in the world. It connects major regions, hosts the world's important trade routes (CPEC, Gwadar), is a nuclear power, and has played key roles in all major global conflicts since 1947. If Pakistan can fix its internal problems (economy, security, governance), it can truly become a regional powerhouse.

Topic 4: Foreign Policy of Pakistan

Simple Definition

Foreign policy is the set of rules and plans that a country uses to deal with other countries. It is about how Pakistan talks to, cooperates with, or disagrees with other nations to protect its own interests.

What is Foreign Policy?

Foreign policy means the way a country interacts with other nations. Every country makes a foreign policy to:

1. Protect its own land and borders (integrity of the state).
2. Make money and improve the economy (economic interest).
3. Keep itself safe from enemies (national security).
4. Be respected and powerful in the world (national prestige and power).
5. Help maintain peace in the world (world order).

Instruments of Foreign Policy

These are the tools a country uses to achieve its foreign policy goals:

1. Diplomacy

This means sending skilled ambassadors and diplomats to other countries. They negotiate, make agreements, and represent their country's views. Good diplomacy prevents wars and builds relationships.

2. Publicity and Propaganda

Countries use media, radio, television, and social media to shape how the world sees them. For example, Pakistan has used propaganda about Kashmir, and India has used propaganda to portray Pakistan negatively.

3. Balance of Power

This means making sure no single country becomes too powerful. Countries form alliances to balance each other. For example, Britain used this in Europe to prevent any one country from dominating.

4. Collective Security

When countries come together to protect each other against a common threat. Smaller countries especially use this because they cannot defend themselves alone. Examples: NATO, SEATO.

5. International Law and Organizations

Countries use the United Nations (UN), international law, and treaties to achieve goals. Many developing countries use the UN to fight colonialism, racism, and demand disarmament.

6. Economic and Non-Political Methods

Countries use trade agreements, economic aid, and economic organizations (like SAARC, ECO) to achieve goals. Sometimes they also use **religion or culture** to build alliances – for example, Arab countries use Islam through the Arab League.

7. War and Peace

War is the last resort – when nothing else works. Peace treaties after wars bring major changes in foreign policy. War is devastating but sometimes countries feel they have no other choice.

Determinants of Foreign Policy

These are the factors that decide what a country's foreign policy will be:

General/Objective Determinants (apply to all countries)

- 1. Sovereignty and Integrity:** Every country first thinks about protecting its own borders and territory.
- 2. Interdependence:** All countries depend on each other (trade, technology, security). This shapes how they behave.
- 3. National Interest:** Every country's first duty is to protect the well-being of its own people.
- 4. Internal and External Conditions:** Both what is happening inside the country and outside affects foreign policy.

Specific/Internal Determinants (different for each country)

- 1. Geography:** Pakistan's location between India, Afghanistan, Iran, and China directly shapes its foreign policy. It cannot ignore any of these neighbors.
- 2. History:** Past experiences guide future decisions. Pakistan's traumatic partition from India means its foreign policy has always been shaped by the fear of India.
- 3. Population:** A large population means more labor, more military manpower, and more economic needs – all of which shape foreign policy.
- 4. Natural Resources:** Countries with oil (like Saudi Arabia, Iran) use it as a foreign policy tool. Pakistan has limited resources, which makes it dependent on others.
- 5. Economic Factors:** A poor country like Pakistan has to depend on foreign loans and aid, which limits its independence in foreign policy.

- 6. Development:** Developed countries can have independent, aggressive foreign policies. Developing countries like Pakistan often have to follow the lead of stronger nations.
- 7. Military Capacity:** A strong military gives a country more power and choices in foreign policy. Pakistan's nuclear weapons give it a strong bargaining position.
- 8. Ideology:** Pakistan was founded on Islamic ideology. This shapes its relations with Muslim countries and how it sees secular states.
- 9. Public Opinion:** In democracies, the public's views matter. If people are angry at a country, the government cannot simply be friends with that country.
- 10. Decision Makers:** The leaders' personalities, beliefs, and decisions directly shape foreign policy. Jinnah, Ayub Khan, Bhutto, Musharraf – each made very different foreign policy choices.
- 11. Domestic Instability:** When a government is weak internally, it sometimes creates external conflicts to distract people. A weak Pakistan has sometimes been accused of doing this.

External Determinants

- 1. International Organizations:** UN decisions, IMF conditions, and FATF rules all affect Pakistan's foreign policy. Pakistan cannot ignore these.
- 2. World Public Opinion:** If the whole world criticizes a country, it has to change its behavior. No country can permanently ignore world opinion.
- 3. Reaction of Other States:** Pakistan always considers how India, USA, China, and Saudi Arabia will react before making major decisions.

For the Exam

The most important determinants for Pakistan specifically are: **Geography** (surrounded by powerful neighbors), **India factor** (permanent rival), **Islam** (connects it to Muslim world), **Nuclear weapons** (biggest bargaining chip), and **Economic weakness** (dependency on USA, China, Gulf states).

Topic 5: Hybrid Warfare – Contemporary Hybrid Threats to Pakistan

Simple Definition

Hybrid warfare is when a country or group attacks another country using a **mix of both military and non-military methods** – like cyberattacks, fake news, economic pressure, supporting terrorist groups, and political interference – instead of just a direct war.

Introduction

Modern warfare has changed. It is no longer just tanks and soldiers. Today's conflicts use a combination of:

- Military force (bombs, guns)
- **Information warfare** (fake news, propaganda)
- **Cyber attacks** (hacking government systems)
- **Economic pressure** (blocking trade, sanctions)
- **Proxy groups** (funding terrorist organizations in another country)
- **Political interference** (supporting opposition parties to destabilize a government)

Pakistan has been facing hybrid warfare since 1971 – even before the term was invented.

The First Case: 1971 Fall of Dacca

The **1971 War** is the best example of hybrid warfare used against Pakistan:

- India did not just fight militarily. It also used **political subversion** – supporting the Awami League and Bengali nationalist movement.
- India trained and armed Mukti Bahini (Bengali fighters) inside Pakistan's own territory.
- India used **propaganda** to turn world opinion against Pakistan.
- By the time Indian army entered, the situation was already destroyed from inside.
- Result: East Pakistan became Bangladesh. Pakistan lost half its country.

Pakistan's Internal Security Problems Post-9/11

After the 9/11 attacks in 2001 and the US invasion of Afghanistan, Pakistan's security situation became very complicated:

- Pakistan joined the US-led War on Terror. This made Pakistan an enemy of many militant groups.
- **Terrorism** became a major internal problem – bomb blasts, suicide attacks, targeted killings.

- **Sectarian violence** (Shia-Sunni conflict) increased.
- **Ethnic conflicts** in Balochistan and Karachi intensified.
- **Bad governance** made all these problems worse.

Internal Challenges Enabling Hybrid Warfare

These are Pakistan's internal weaknesses that make it easy for enemies to attack through hybrid methods:

- **Bad Governance:** Corruption, poor law and order, lack of basic services make people angry and easy to manipulate.
- **Low Education:** Uneducated youth can be easily radicalized by extremist groups.
- **Weak Economy:** Energy shortages, unemployment, poverty make people frustrated and vulnerable.
- **Institutional Conflict:** Friction between military, judiciary, and politicians creates instability.

External Challenges

- Pakistan's strategic location makes it a target for foreign interference.
- **India** (through RAW – Research and Analysis Wing) has been accused of supporting Baloch separatists and funding anti-Pakistan groups.
- Kulbhushan Jadhav's arrest – an Indian spy – proved Indian hybrid operations in Balochistan.
- The **EU DisinfoLab** exposed a large Indian propaganda network called "Indian Chronicles" that was spreading fake news about Pakistan internationally.
- Pakistan was placed on the **FATF grey list** – largely due to Indian lobbying.

Security Challenges

Terrorism – TTP (Tehrik-e-Taliban Pakistan)

After Pakistan joined the US War on Terror, a group called **TTP** was formed. It turned against Pakistan and launched devastating attacks:

- Attacked mosques, markets, schools, army posts.
- Used civilians as cover (blending into population).
- The **2014 APS (Army Public School) massacre** – 132 children killed – was TTP's worst attack.
- Evidence showed TTP received foreign funding (from India, Afghanistan).

ISIS (Islamic State) in Pakistan

- ISIS (also called Daesh or ISIL) has had some presence in Pakistan.
- ISIS-Khurasan (covering Pakistan and Afghanistan) was established.
- Recruited some members from tribal areas and Balochistan.
- However, Pakistan's strong military kept ISIS at a relatively low level.

Sectarian Organizations

- Shia-Sunni conflict has been a problem since before independence.
- Foreign countries fueled this: **Saudi Arabia** funded Sunni extremist groups, **Iran** supported Shia groups.
- This is classic hybrid warfare – use a country's internal religious divide to destabilize it.

State-Level Hybrid Attacks on Pakistan

These are the methods used by states (especially India) against Pakistan:

Political Subversion

NGOs and foreign-funded groups try to:

- Incite people to protest against the army and government.
- Spread anti-Pakistan narratives.
- Exploit ethnic and religious differences.

Diplomatic Attacks

- India has tried to isolate Pakistan internationally.
- Used FATF to try to blacklist Pakistan (as a country funding terrorism).
- Spread propaganda calling Pakistan a “sponsor of terrorism.”

Attacks on CPEC

- CPEC is vital for Pakistan's economy. India and others want to stop it.
- **RAW and Afghan NDS** (intelligence agencies) have tried to sabotage CPEC projects.
- Supporting Baloch separatists to create unrest in the areas where CPEC passes.
- Spreading fake news about CPEC – saying it harms Pakistan, routes are wrong, etc.

Nuclear Propaganda

False accusations against Pakistan's nuclear program:

- Pakistan's nukes will fall into terrorist hands (not true – they are well protected).

- Pakistan is spreading nuclear technology to others.
- A nuclear-free Pakistan would be better (trying to pressure Pakistan to give up its deterrence).

Water War

India uses water as a weapon against Pakistan:

- India is the **upper riparian** (its rivers come first before reaching Pakistan).
- India has built dams and diverted rivers, violating the **Indus Waters Treaty**.
- Pakistan is heavily dependent on agriculture – water shortages can devastate its economy.

Cyber Warfare

- Hacking government and military systems.
- Spreading disinformation on social media.
- Psychological operations to create fear and mistrust.

Implications/Effects of Hybrid Warfare on Pakistan

Human Loss: Thousands of soldiers and civilians have been killed in terrorist attacks, especially in KPK, FATA, and Balochistan.

Economic Loss: Pakistan has lost over **\$258 billion** due to the War on Terror. Foreign investment dropped, tourism collapsed, infrastructure was destroyed.

National Image: Pakistan is falsely portrayed as a terrorist state in international media. This is deliberate hybrid propaganda.

Social Damage: Ethnic nationalism (“I am Balochi/Punjabi first, Pakistani second”) has been promoted by foreign elements to divide Pakistan. Internally displaced people (refugees from conflict areas) are also psychologically vulnerable to extremist recruitment.

Conclusion

Conclusion in Simple Points

- Pakistan has been a target of hybrid warfare since 1971, not just recently.
- Both internal enemies (TTP, sectarian groups) and external enemies (India via RAW) use hybrid methods.
- Pakistan’s internal weaknesses (bad governance, poverty, weak institutions) make it vulnerable.
- Understanding hybrid warfare is essential for Pakistan to protect itself.
- Pakistan needs strong institutions, good governance, and a smart counter-strategy to fight hybrid warfare.

Topic 6: Administrative and Political Problems of Pakistan

Simple Definition

Administrative problems mean difficulties in running the government properly. Political problems mean issues in the political system – like unstable governments, military coups, and weak democracy. Pakistan has had both since independence.

Introduction

Since 1947, Pakistan has faced serious problems in both governance (administration) and politics. These problems have prevented the country from developing properly and have created instability. The main causes are the colonial legacy, weak institutions, lack of political culture, and military interference.

Major Administrative Problems

1. Bureaucratic Dominance

Pakistan inherited the British ICS (Indian Civil Service) system. Civil servants (bureaucrats) became very powerful because politicians were weak and inexperienced. This meant:

- Government decisions were made by officers, not elected representatives.
- Accountability was low – bureaucrats were hard to remove.
- The common person had no real access to justice or services.

2. Corruption

Corruption is one of Pakistan's biggest administrative problems:

- Government officers take bribes to do their job.
- Public money is stolen by politicians and officials.
- Corruption has damaged hospitals, schools, courts, police, and all government departments.
- Pakistan consistently ranks low in global transparency (Transparency International rankings).

3. Poor Service Delivery

Despite large budgets, basic services remain very poor:

- Poor education quality – government schools lack teachers and facilities.
- Poor healthcare – government hospitals lack medicines and doctors.
- Poor infrastructure – roads, electricity, water supply are inadequate in most areas.

4. Law and Order Problems

- Police are poorly trained, underpaid, and often corrupt.
- Courts are slow – cases take decades to resolve.
- People with money and power escape justice easily.

5. Energy Crisis

Pakistan has suffered severe energy shortages (load-shedding) for decades. Industries cannot operate properly, businesses suffer, and ordinary people face hours of darkness. This is partly due to poor administration and corruption in energy sector management.

Major Political Problems

1. Military Coups and Intervention

Pakistan has experienced four direct military coups:

- **1958** – General Ayub Khan
- **1969** – General Yahya Khan
- **1977** – General Zia-ul-Haq
- **1999** – General Pervez Musharraf

Military rule prevented democracy from maturing. Political parties remained weak. Even when civilians were in power, the military was often the real decision-maker (“hidden hand”).

2. Political Instability

Pakistan has had many prime ministers and governments that did not complete their terms:

- Governments changed through coups, court decisions, or presidential dismissals.
- No stable long-term policy was possible – every new government had different priorities.
- Between 1947 and 1958 (just 11 years), Pakistan had 7 prime ministers!

3. Delayed Constitution-Making

- Pakistan took **9 years** to make its first constitution (1956).
- The debate about Islamic vs secular state was never resolved.
- The constitution was abrogated (cancelled) multiple times by military rulers.

4. Weak Political Parties

- Pakistani political parties are dominated by one leader or one family (dynasty politics).
- Internal democracy in parties is very weak.

- Parties change their positions frequently based on power interests, not ideology.

5. Center-Province Conflict

Pakistan has 4 provinces. The federal government often dominates and provinces feel they do not get enough resources or autonomy. Balochistan has been a recurring problem – Baloch nationalists feel exploited by the center. The **18th Amendment (2010)** gave more powers to provinces, but tensions remain.

6. Judicial Problems

- Courts are slow – millions of cases are pending.
- Judicial independence has sometimes been compromised.
- Poor people cannot afford lawyers and do not get justice.

For the Exam

Key problems to remember: Military interference, corruption, political instability, delayed constitution, weak parties, poor service delivery, energy crisis, center-province tension.

Topic 7: Fiscal Relations Between Federal and Provincial Governments

Simple Definition

“Fiscal relations” means how money (taxes, revenue) is collected and shared between the central (federal) government and the four provinces. Who gets how much? This is a very sensitive and important issue in Pakistan.

Introduction

Pakistan is a federal state – it has a central government and four provinces (Punjab, Sindh, KPK, Balochistan). The big question is: **who collects taxes and who gets how much money?**

This matters because:

- Provinces need money to run schools, hospitals, roads, police.
- If a province does not get enough, its people suffer.
- If the center keeps all the money, provinces feel dominated and resentful.

How Revenue is Collected in Pakistan

Federal Government collects:

- Income tax (tax on salaries and profits)
- Sales tax (GST) – tax on goods and services
- Customs duty (tax on imported goods)
- Federal excise duty

Provincial Governments collect:

- Agriculture income tax (though poorly enforced)
- Property tax
- Sales tax on services (after 18th Amendment)
- Stamp duties and vehicle tax

But the federal government collects much more than provinces. So there must be a system to **share this money** with provinces.

National Finance Commission (NFC) Award

The **NFC Award** is the main mechanism for sharing money between the federal government and provinces.

What is NFC Award?

The National Finance Commission (NFC) is a committee that meets periodically (every 5 years) and decides how to divide the total tax revenue (called the **Divisible Pool**) between the federal government and the four provinces.

How is money distributed?

The money is divided based on a formula that considers:

1. **Population** – biggest factor. More people = more money.
2. **Poverty/Backwardness** – poorer provinces get extra.
3. **Revenue Generation** – provinces that collect more taxes get rewarded.
4. **Area/Inverse Population Density** – larger areas with fewer people also get extra.

The 7th NFC Award (2009) was the most important:

- Provinces' share increased from 47.5% to **57.5%** of the divisible pool.
- This was a major victory for provinces.
- It was linked to the **18th Amendment** which gave more powers to provinces.

18th Amendment (2010) and Fiscal Devolution

The 18th Amendment was a landmark change:

- Gave **more financial and administrative powers** to provinces.
- Transferred 47 government subjects (education, health, etc.) from federal to provincial control.
- Provinces now had to manage and fund these areas themselves.
- Increased provincial autonomy significantly.

Problems in Fiscal Relations

1. Horizontal Imbalance

All provinces are not equal. **Punjab** is the richest and most populated. **Balochistan** is the largest but most underdeveloped. The formula does not always satisfy smaller provinces.

2. Federal Dependence

Provinces are very dependent on federal transfers. They do not collect enough of their own revenue. This means provinces are financially weak and controlled by the center.

3. Disputes Over Natural Resources

Who owns the gas in Balochistan? Who owns the oil in Sindh? Who gets the money from hydro-electricity in KPK? These are constant disputes between provinces and the federal government.

- Balochistan gas – Balochistan feels it gets too little revenue from its own gas.
- Sindh – disputes over water distribution (Indus River).

4. Poor Provincial Tax Collection

Provinces do not collect enough of their own taxes. Agriculture income tax – which should be huge in an agricultural country – is barely collected because rich landlords (who are also politicians) avoid it.

5. Fiscal Deficit

Pakistan's federal government regularly spends more than it earns. This means the government has to borrow money (from IMF, World Bank, China, etc.), creating a **debt crisis**. This also reduces what can be given to provinces.

Key Points for Exam

- NFC Award = mechanism to divide tax revenue between center and provinces.
- 7th NFC Award (2009) increased provincial share to 57.5%.
- 18th Amendment (2010) gave more powers and responsibilities to provinces.
- Main problems: horizontal imbalance, fiscal dependence, resource disputes, poor tax collection.

Topic 8: Relations of Pakistan with USA, China, and Afghanistan

Simple Definition

These three relationships are the most important in Pakistan's foreign policy. USA, China, and Afghanistan directly affect Pakistan's security, economy, and survival.

Pakistan-USA Relations

Overview

Pakistan and the USA have had a complex relationship since 1947 – sometimes very close allies, sometimes tense and difficult. Their relationship has always been more about **shared strategic interests** than genuine friendship.

Phase 1: Cold War Alliance (1947–1979)

- Pakistan joined **SEATO (1954)** and **CENTO (1955)** – US-led military alliances against the Soviet Union.
- In return, Pakistan got military aid, weapons, and financial support.
- The USA used Pakistan's airbases to spy on the Soviet Union (U-2 spy plane incident, 1960).
- But the relationship was not always smooth – USA supported India in the 1965 war and did not help Pakistan in 1971.

Phase 2: Soviet-Afghan War (1979–1989)

- When Soviet Union invaded Afghanistan (1979), the USA needed Pakistan desperately.
- Pakistan became the **frontline state** – allowing CIA operations, training Mujahideen (Afghan fighters), and providing supply routes.
- Pakistan received billions in military and economic aid.
- But after the Soviets left (1989), USA **abandoned Pakistan** – stopped aid, imposed sanctions over Pakistan's nuclear program (Pressler Amendment, 1990).

Phase 3: War on Terror (2001–2021)

- After 9/11, the USA needed Pakistan again.
- President Musharraf joined the US War on Terror. Pakistan again became a frontline state.
- Pakistan received over \$33 billion in aid.
- But tensions were constant: USA accused Pakistan of supporting Taliban (double game), Pakistan was angry about drone strikes killing Pakistani civilians.

- The 2011 **Abbottabad Operation** (killing of Osama bin Laden) was done without informing Pakistan – a major blow to trust.
- After US withdrawal from Afghanistan in 2021, the relationship became less important for both sides.

Current State

The USA-Pakistan relationship is complex:

- USA wants Pakistan to control Taliban, prevent terrorism.
- Pakistan wants better trade, investment, and to not be pressured over its ties with China.
- Pakistan is moving closer to China, which makes the USA uncomfortable.

Key Pattern of US-Pakistan Relations

USA treats Pakistan as a **tool, not a true ally** – uses Pakistan when it needs it (Cold War, War on Terror), then abandons it. Pakistan has learned this lesson but has limited options.

Pakistan-China Relations

Overview

China-Pakistan relations are called “**Pak-China Dosti**” (friendship) and are described as higher than the Himalayas, deeper than the oceans, and sweeter than honey! This is Pakistan’s most reliable and consistent relationship.

Why This Relationship Works

- Both countries have a **common rival: India**.
- China benefits from Pakistan’s strategic location (access to Arabian Sea through Gwadar).
- Pakistan benefits from China’s economic and military support.
- This is a genuine strategic partnership based on mutual interests.

Key Milestones

- **1963:** Sino-Pakistan Boundary Agreement – China and Pakistan settled their border. China gave some territory to Pakistan. India was furious.
- **1965 War:** China supported Pakistan against India.
- **Nuclear Cooperation:** China helped Pakistan build the Khushab nuclear reactor. China also provided missile technology.
- **Military Cooperation:** China provides Pakistan with aircraft (JF-17 Thunder), submarines, frigates, and other military equipment at low cost.

CPEC – China-Pakistan Economic Corridor

- **CPEC** is a \$62 billion infrastructure and energy project connecting China's western province (Xinjiang) to Pakistan's **Gwadar Port**.
- It includes: roads, highways, power plants (solving Pakistan's energy crisis), railways, and industrial zones.
- Gwadar gives China a warm-water port and cuts thousands of kilometers from China's trade route to the Middle East and Africa.
- For Pakistan, CPEC brings investment, jobs, energy, and economic development.

Current State

The relationship is very strong. China supports Pakistan at the UN (vetoes anti-Pakistan resolutions), provides economic aid, and is Pakistan's biggest defense partner. Pakistan is China's most important ally in South Asia.

Pakistan-Afghanistan Relations

Overview

Pakistan-Afghanistan relations are the most **complicated and difficult** of all Pakistan's foreign relationships. The two countries share a long border, ethnic ties, and a troubled history.

The Durand Line Problem

- The **Durand Line** is the border between Pakistan and Afghanistan, drawn by the British in 1893.
- Afghanistan has **never officially accepted** this border.
- Millions of Pashtuns live on both sides of this border.
- This makes the border porous (easy to cross illegally) and a source of constant tension.

Soviet-Afghan War (1979–89)

- Pakistan supported the Afghan Mujahideen against the Soviet occupation.
- Pakistan became a base for training fighters and sending weapons.
- Millions of Afghan refugees came to Pakistan (over 3 million at peak).
- This brought guns, drugs, and extremism into Pakistan – problems that still exist today.

Taliban Era (1996–2001)

- Pakistan was one of only three countries to recognize the Taliban government in Afghanistan.
- Pakistan saw the Taliban as a way to have friendly influence in Afghanistan and prevent India from gaining influence there.

Post-9/11 Complications

- After 2001, Pakistan officially joined the war against Taliban but was accused of supporting them secretly.
- Afghan government (backed by India and USA) constantly accused Pakistan of supporting Taliban.
- Pakistan accused Afghanistan of allowing TTP (Pakistani Taliban) to use Afghan soil to attack Pakistan.
- This created a **mutual blame game** that has never been resolved.

After US Withdrawal (2021)

- Taliban retook Afghanistan in August 2021 after US withdrawal.
- Pakistan initially welcomed this, hoping for a friendly Afghanistan.
- But the new Taliban government has not recognized the Durand Line and has not stopped TTP attacks on Pakistan.
- Relations have become tense. Pakistan has even conducted airstrikes inside Afghanistan targeting TTP.

Key Point About All Three Relations

- USA: Transactional relationship – useful but unreliable. Uses Pakistan when needed.
- China: Strategic partnership – genuine, consistent, based on mutual benefits.
- Afghanistan: Most difficult – shared border, shared ethnicity, but mutual distrust and proxy conflict.

Topic 9: Climate Change and Environmental Degradation in Pakistan

Simple Definition

Climate change means the long-term change in the Earth's weather patterns – mainly getting hotter – because of human activities like burning fuel and cutting trees. Environmental degradation means the worsening of the natural environment. Pakistan is one of the countries most affected by both.

Introduction

Pakistan is ranked among the **top 10 most vulnerable countries to climate change** in the world – yet it contributes less than 1% of global greenhouse gas emissions. This is deeply unfair. Pakistan faces extreme heat, floods, droughts, glacier melting, and water scarcity – all worsened by climate change.

What is Climate Change?

- The Earth is getting warmer because **greenhouse gases** (CO₂, methane) trap heat in the atmosphere.
- These gases mainly come from burning fossil fuels (coal, oil, gas) in factories, cars, and power plants.
- Also from cutting down forests (deforestation) – trees absorb CO₂.
- As the Earth warms, weather patterns change: more floods, more droughts, more extreme weather.

How Climate Change Affects Pakistan

1. Floods

- Pakistan is hit by massive floods almost every year.
- **2010 Floods** – worst in Pakistan's history. 20 million people affected, 2,000 killed.
- **2022 Floods** – one-third of Pakistan was under water. Over 1,700 killed, \$30 billion in damage.
- Glaciers in northern Pakistan are melting because of rising temperatures, causing glacial lake outburst floods (GLOFs).

2. Glaciers Melting (GLOF)

- Pakistan has more glaciers than any country outside the polar regions – over 7,000 glaciers.
- Rising temperatures are melting these glaciers rapidly.
- When glacial lakes overflow, they cause sudden destructive floods in valleys below.

- Long term: glaciers are Pakistan's water reservoir. If they melt completely, there will be severe water shortages.

3. Water Scarcity

- Pakistan is a **water-stressed country** – it does not have enough water for all its needs.
- Erratic rainfall (irregular, unpredictable rain) reduces water availability.
- Overuse of groundwater (pumping too much underground water) is depleting water tables.
- The Indus River (Pakistan's lifeline) is threatened by both Indian upstream dams and glacier melt.

4. Extreme Heat

- Pakistan is getting hotter. Cities like Jacobabad and Nawabshah regularly record temperatures above 50°C – among the hottest in the world.
- **Heatwaves** kill people and animals and destroy crops.
- Urban areas suffer from the **urban heat island effect** – cities are hotter than surrounding countryside.

5. Agricultural Impact

- Pakistan's economy depends heavily on agriculture. Climate change is devastating crops.
- Unpredictable rains, droughts, floods, and heatwaves all destroy harvests.
- Food insecurity is increasing – more people go hungry.
- Farmers suffer huge losses, leading to rural poverty and migration to cities.

6. Displacement of People

Climate-related disasters (floods, droughts) force millions of people to leave their homes and move to cities. This creates social, economic, and security problems in urban areas.

Environmental Degradation in Pakistan

Beyond climate change, Pakistan also faces serious environmental degradation:

1. Deforestation

- Pakistan has one of the **highest deforestation rates** in the world.
- Trees are cut for firewood, agriculture, and construction.
- Less forests means less rainfall, more soil erosion, more flooding, and increased CO₂.
- The **Billion Tree Project** (started in KPK, later national) was a positive step.

2. Air Pollution

- Lahore and Karachi regularly rank among the **most polluted cities in the world**.
- Causes: vehicle emissions, factory smoke, brick kilns, burning of crop stubble.
- **Smog** in winter (especially in Punjab) has become a major health crisis.

3. Water Pollution

- Industrial waste is dumped directly into rivers.
- Untreated sewage flows into water bodies.
- This makes drinking water unsafe and kills aquatic life.

4. Plastic Pollution

- Massive plastic waste in cities, rivers, and coastal areas.
- Pakistan uses billions of plastic bags every year.
- Plastic in rivers flows into the Arabian Sea, damaging marine life.

5. Soil Degradation

- Overuse of chemical fertilizers damages soil quality.
- Waterlogging and salinity (salt build-up in soil) affects millions of acres of farmland, especially in Sindh and Punjab.

Pakistan's Efforts and Challenges

What Pakistan is doing:

- **10 Billion Tree Tsunami Project** – planting trees across Pakistan.
- **National Climate Change Policy** – plans to address floods, water scarcity, renewable energy.
- Joining international agreements: **Paris Agreement** (commitment to reduce emissions).
- **Roshan Pakistan Lahore** – green bus rapid transit and cleaner energy projects.

Main Challenges:

- Lack of funds – climate adaptation requires billions of dollars Pakistan does not have.
- Weak institutions – environmental laws exist but are rarely enforced.
- Poverty – poor people cannot afford clean energy or sustainable practices.
- International injustice – rich countries caused climate change but Pakistan suffers most. Pakistan demands **climate finance** from developed nations.

Key Points for Exam

- Pakistan emits less than 1% of global CO₂ but is among the top 10 most climate-vulnerable countries.
- Main impacts: floods (2022 was devastating), glacier melt, water scarcity, extreme heat, agricultural losses.
- Main environmental problems: deforestation, air pollution (smog), water pollution, plastic, soil degradation.
- Pakistan's response: Billion Tree Project, Paris Agreement, National Climate Policy.
- The fundamental injustice: Pakistan pays the price for rich countries' pollution.

Final Quick Revision – All 9 Topics at a Glance

No.	Topic	One-Line Summary
1	Muslim Nationalism 1857–1947	Muslims were a separate nation; Two-Nation Theory → Pakistan 1947
2	Colonial Legacy	British left bureaucracy, strong army, weak democracy; shaped Pakistan's problems
3	Geopolitical Importance	Pakistan is at the crossroads of South Asia, Middle East, China; nuclear power; Gwadar; CPEC
4	Foreign Policy	How Pakistan deals with the world; tools are diplomacy, alliances, economic methods; shaped by geography, history, nuclear power
5	Hybrid Warfare	Enemies attack Pakistan through terrorism, propaganda, cyber, economic pressure, not just war
6	Admin & Political Problems	Military coups, corruption, bad governance, weak parties, energy crisis
7	Fiscal Relations	NFC Award shares tax revenue; 18th Amendment gave provinces more power and money
8	Relations with USA/China/Afghanistan	USA: unreliable ally; China: best friend; Afghanistan: most difficult relationship
9	Climate Change	Pakistan suffers floods, heat, water scarcity; 2022 floods were catastrophic; Billion Tree Project

Good Luck in Your Exam!

*Read each topic carefully. Focus on key dates, names, and concepts.
Everything important is covered in this guide.*
