

Lab Task:	13
Course Code:	CL2005
Course Title:	Database Systems - Lab
Semester:	Spring 2026
Instructor:	Muhammad Mehdi
Email:	muhammad.mehdi@nu.edu.pk

Guidelines

- Please review the lab manual before starting the task to ensure you fully understand the requirements.
- You may use **only the concepts covered in the lab manual** to complete this task.
- Your submission must be a **single PDF file** that includes:
 - The source code (in plain text)
 - Screenshots of the corresponding outputs
- Name your file using the following format: **rollno_name_labtasknumber.pdf**
Example: *24p-1234_ozair_labtask13.pdf*
- Unethical use of AI tools will result in a **deduction of 5 marks**.
- Late submissions will incur a penalty of **-1 mark per day**.

Tasks

Download and set up the following tools:

- MongoDB Server
- MongoDB Shell (mongosh)
- MongoDB Compass (GUI tool)

After installation, you are required to perform **all the given tasks twice**:

- Once using MongoDB Shell (CLI)
 - Once using MongoDB Compass (GUI tool)
1. Create a database named **your_roll_number**.
 2. Create a collection named **users** to store data of users in a social network. Create another collection named **posts** to store posts created by users.
 3. Display all collections in the selected database.
 4. Insert a single document into the **users** collection using **insertOne()** with the following fields (choose appropriate values):

- name
 - email
 - age
5. Insert multiple documents into the **users** collection using **insertMany()**.
 6. Insert multiple documents into the **posts** collection using **insertMany()** with the following fields:
 - **userId** (representing the **_id** field of corresponding document in **user** collection)
 - **content**
 - **likes**
 - **createdAt**
 7. Create a JavaScript file named **social_data.js** that contains multiple insert statements for both collections. Execute the JavaScript file using the **load()** function in MongoDB Shell.
 8. Display all documents from both **users** and **posts** collections to verify successful insertion.
 9. Drop the **posts** collection from the database. Verify that the collection has been removed.
 10. Drop the entire database **your_roll_number**. Verify that the database has been deleted by displaying all databases again.
